DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. **Claims 1-11 and 33**, drawn to a method for non-vascular implant of a sensor comprising, *inter alia*, allowing a foreign body capsule to form around the area of the implant, classified in class 604, subclass 500.
- II. **Claims 12-14, 15-28, and 29-32**, drawn to for non-vascular implant of a sensor, classified in class 604, subclass 511.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, invention II does not disclose the formation of a foreign body capsule around the area of the implant suggesting a different function and effect.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
